Confusing Nouns

Learning nouns in a new **language** may seem easy, but in fact the grammar of nouns can vary from language to language. Spanish, for example, has male nouns and female nouns, but why *newspaper* is masculine and *magazine* is feminine is a mystery. Japanese nouns have no plural form, so Japanese learners of English may think -s is unnecessary in the phrase *many books* because the word *many* already means plural. In German, all nouns are capitalized **whereas** English capitalizes nouns that name specific people, places, and things. **For example**, English **does not** capitalize *woman* or *city*, but it does capitalize *Susan* and *Cairo*. Finally, some languages mark the role of the noun as subject or direct object, so in Japanese, -wa is often **added** to a noun as subject and -o to a noun as the direct object of a verb. English does not require suffixes to mark the role of nouns in **a sentence**. Because nouns express basic ideas such as the name of a person, place, or thing, they seem easy, but they can be confusing.
